Paul McNair Cassell, Tomoki Hattori, Steven Robert Hawley, Qiang Hu, Rajat Mehta Vishal Kumar Rathi

Mentor

Taylor Startin

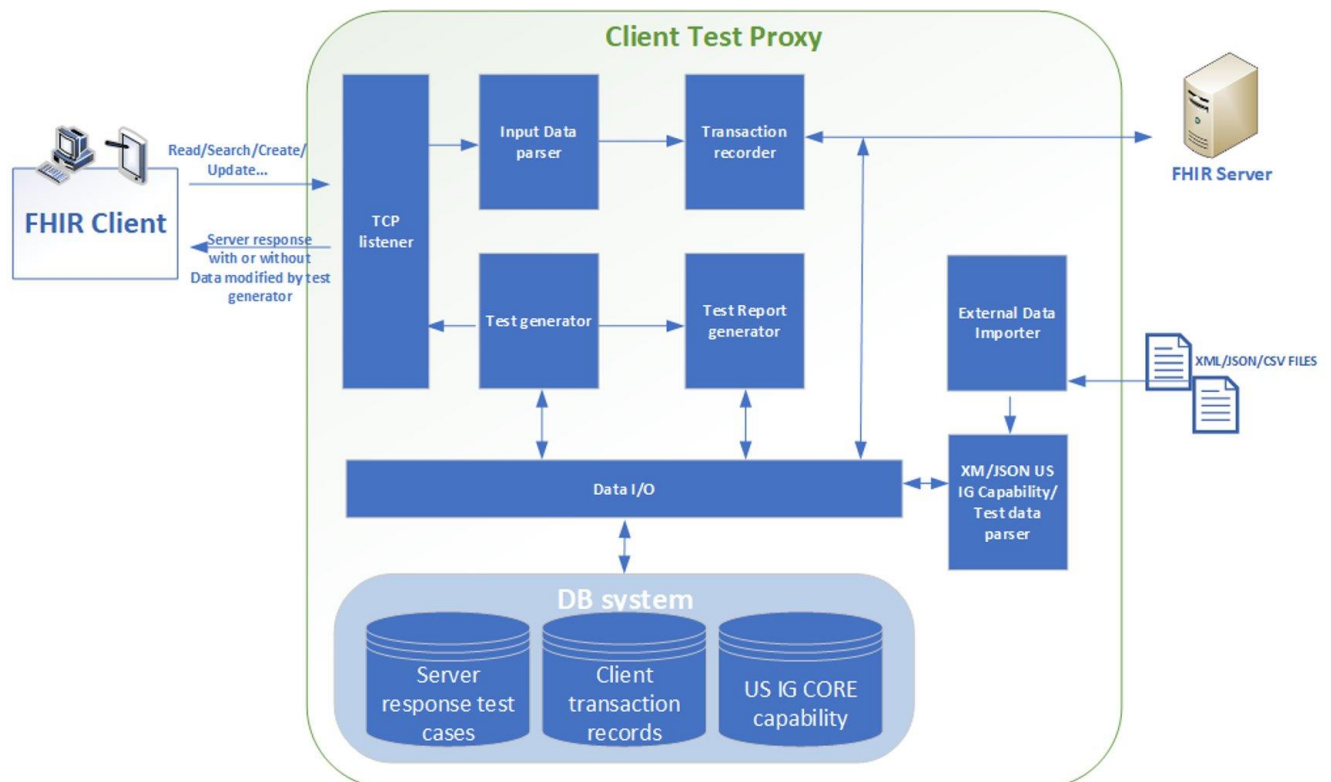

Quick Description of Application

Application to test a client's conformance with FHIR implementation guides

GitHub Repository

Link: <https://github.com/inferno-community/client-fhir-testing>

Architecture

Technologies

- Core language for development of proxy server will be Ruby
 - Rack-proxy library (part of ruby-core) for the HTTP proxy server
- SQLite will be used for data persistence
 - Persist API interactions in SQLite for replaying data for future test runs
 - Consider log files (JSON/CSV format) as a potential option for short-term data storage mechanism
- JavaScript/HTML/CSS for UI development
